Anchor Format Notice

We have a new anchoring pattern that we are transitioning to. There is no price change. This anchor pattern gives 8 points of anchoring, holding down and over the edge lip. All Our anchoring formats have been tested against the military V-22 Osprey tilt-rotor aircraft.

Advantage over previous Spiral Anchors:

- Penetrates ground 4 inches deeper
- Uses 8 instead of 6 anchors
- Each anchor overlaps the edge of the mat anchoring at the perimeter
- Each anchor gives two points of secure contact with the ground
- Installation with a 3-5 pound hand sledge is easy
- Rocks are easier to navigate or break through with the straight anchor
- If an impenetrable obstacle is encounter a straight hammer 5/8" drill bit can be used to pilot the hole for the straight anchor.

New Format

Two staple stakes anchors at the tips of the mat and 3 staple stakes on each side
